

DeepSight Security Threat & Alert Services

Overview

Security Threat & Alert Services, through our Symantec partnership, allows organizations to have access to the most comprehensive and customizable alert service for environment-specific vulnerabilities and malicious code alerts. Combined with Emagined Security's Security Threat & Alert Services, our clients take full advantage of the DeepSight Early Warning Services.

Symantec DeepSight Early Warning Services provides organizations with timely, relevant threat and vulnerability exposure intelligence delivered through an intuitive web-based portal as well as through real-time alerts. Organizations can use this valuable global visibility and intelligence to help ensure that they adapt their security and risk profile to keep pace with the rapidly changing threat landscape. Specific use cases/application within Information Security programs include:

- **Vulnerability Management & Remediation Tracking**
- **Threat Protection Programs**
- **Patch Management**
- **Configuration Management**
- **Incident Management**
- **Security Awareness & Training**

Benefits

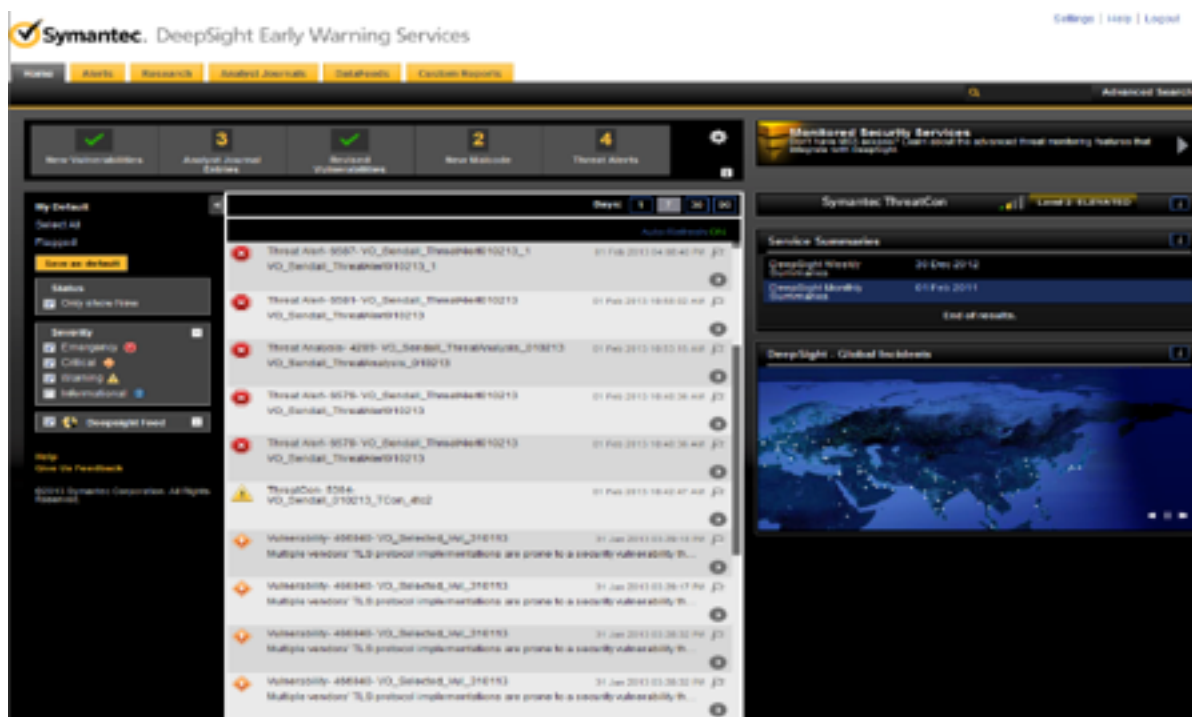

The evolution of information technology is a never-ending process. Unfortunately, technological changes bring added risk and vulnerabilities. Our Security Threat & Alert Service has the mechanisms in place to keep you abreast of these changes and identify those vulnerabilities that could potentially impact your information security structure. Our Security Alert Service gives you the critical information you need to address these risks before they escalate.

Traditional security solutions, although effective, are becoming more easily bypassed by attacks rapidly changing their appearance, and can only operate in a reactive mode once a known threat is detected. Adding visibility into the global threat landscape can provide and enable more proactive security policy to be implemented.

Description of Service

Security Threat & Alert Services offers the most comprehensive and customizable threat & alert services for environment-specific vulnerabilities and malicious code alerts. Combined with Emagined Security's Security Threat & Alert Services, our clients can take full advantage of the DeepSight Early Warning Services by surrounding it with a variety of customized services:

- Initial Configuration
- Dashboard Configurations

- Monthly Alert Analysis & Technical Correlation
- Server Sensitivity Classifications
- Vulnerability Tracking
- Incident Response Data Analysis (e.g., registry changes, DLL modifications) & Correlation
- Automation & Integration (e.g., GRC, SIEM)
- Custom Usage (e.g., patch process vulnerability mappings)
- DeepSight Subscription Available

| Feature | Starter | Advanced | Silver | Gold | Platinum |

| Remote Security Expert Service | | | | | ● |

For organizations trying to keep pace with the threat landscape and trying to aggregate threat data from numerous sources, which might have unknown data quality, identifying which threats are relevant and then prioritizing mitigation actions is more than a full-time task. The time and effort spent on research and analysis also reduces the time available for utilizing this data to enhance security.
