

# **Symantec Implementation Services**

## Overview

Emagined Security offers a comprehensive array of Symantec Implementation Services. Emagined Security's implementation teams are fully qualified to support effective lifecycle integrations of each Symantec solution. We ensure that our client's design processes adequately take security considerations into account, implementations are correctly installed and configured and that integration with third party and other Symantec product offerings are seamless. Our specialists work towards increasing business performance and reducing risk while enabling secure business foundations.

## Benefits

Symantec Corporation has chosen Emagined Security as a "Tier 1" Partner enabling us to support all other "Tier" partners with Symantec Implementation Services. Emagined Security uses a streamlined process to allow you to directly or indirectly contract with us to acquire these services.

Emagined Security can help you design and implement a security infrastructure such that you are assured the highest level of protection for your corporate assets. As a 'one-stop shop,' we can design and implement comprehensive security architectures and then integrate Symantec products into them. Additionally, the fact that we efficiently manage and our internal processes and use well-designed and proven methodologies make all our services, implementation services included, cost effective for our customers.

The following table presents Emagined Security's proposed eight-phase methodology for Symantec Implementation Services:

Phase	Description
1	Requirements gathering / discovery
2	Requirement analysis
3	Solution recommendation
4	Solution development and lab testing
5	Solution design & documentation
6	Implementation and rollout
7	Vulnerability testing
8	Training

## Description of Service

Emagined Security has a variety of Symantec Certified Security Engineers (SCSE) available. Emagined Security can help you design, implement, configure, and integrate each of Symantec's solutions, including the following:

- Clientless VPNs
- Control Compliance Suite
- Data Loss Prevention
- End-Point Protection
- Enterprise Security Manager (ESM)
- Firewall and VPNs
- Incident Manager
- Intrusion Detection and Protection

Once we have gathered the relevant information, Emagined Security will provide you with a detailed report outlining the requirements of building a secure solution. Once we determine the proper design to fit your needs, we will assemble a team of experts to construct your secure solution.
